

Who pays for the metre above the minimum?

**A few extra metres feel generous. The
buyer's budget doesn't stretch to them.**

Every metre above the minimum is a loss

In a price-sensitive market, a buyer's budget doesn't stretch because a two-bedroom came out a few metres bigger. We still pay to build those metres.

Hit the minimum of each typology, and you've nailed it.

Name the extra room honestly

Legally, a T0+1 is still a T0 (a studio), and the '+1' is a market label. The room is real and buyers treat it that way, so check the registration first.

Past the minimum, metres are paid for but not priced

Draw each unit to its typology minimum first; every metre beyond it has to earn cash or atmosphere.

Small flats need their own logic

Too often they're drawn as if they were big ones: a floating sofa is a mistake in a small room, and a door that swings the wrong way costs a whole wall of furniture.

Lobby and stairs count too: everyone pays, nobody enjoys them net.

**Every extra metre
earns cash or
atmosphere.
If it does
neither, cut it.**

Take the check to your next plan. Tell me what I missed.
