

Can an apartment be bigger than its own building?

**Against the registry, yes, and it
gets complicated.**

The top floor outgrew the paper

An old building in a historic town centre, shared by several owners. Measured on site, its top floor covers more ground than the registry gives the entire building.

It's one thing to change the permilage. This is something else.

You can't fix just your floor

In law, the building is a single vertical entity. Correct the footprint at the top and the whole building changes on paper: new registration, survey, every owner's signature.

One floor, bigger than the whole building on paper

Top floor

measured on site

Registered

whole building,
on paper

N

The building is one vertical legal entity, so fixing the top floor means every owner signs.

First, we prove what exists

Handwritten land books, the municipal licensing archive, historic aerial photos. Then the walls, where ceiling height and technique change halfway back.

**Otherwise, how do we convince anyone
that what we have is what we have?**

**If the space is bigger
than the paper, it
isn't a bonus. Price
it as a collective
legal project.**
